

Can a free public service that anyone can easily use actually help to counter insurgent and terrorist operations in Iraq, in Great Britain, in the United States?

Absolutely yes. Today.

Nomad Eyes is a way for you as a citizen, a normal person in any situation, can alert a situation awareness expert system about something that may be an emergency or disaster in the making – terrorist or non-terrorist, of any sort that is a threat to lives and safety because of possibly a chemical, biological, radioactive or explosive situation.

Nomad Eyes was invented in the late 1990's before 9-11. It was further refined after 9-11 and has been copied and used as the seed idea for a number of very expensive, often classified, and thus far totally unavailable (for the general public) experimental systems.

Nomad Eyes is available to anyone who has in their possession any of the following:

- a cell phone
- a PDA with an internet connection
- an iPhone or similar phone+computer device
- an iPod or similar MP3 device
- a laptop
- a PC

Nomad Eyes can be used anywhere that any of the above devices can be used to send a simple email message or SMS message.

Of course, sending a photo or video clip or audio msg may help and this can be done as well.

If you buy or obtain from a public supplier one of the Nomad Eyes sensor units to use with your phone or PDA, then you can be even more effective by having your own mobile sensor-detector for dangerous chemicals, germs, explosives, radioisotopes.

But even with just the phone or PDA, you have a device that could help to save your live and that of your family and neighbors. For FREE.

There is no charge to send a message. There is no subscriber fee. It is simply FREE.

Not only that, there are special offers and incentives that could make or save you some money by using Nomad Eyes while you are doing everything else in your everyday life.

Go to <http://nomadeyes.com> and learn more.

Go direct to <http://nomadeyes.com/use.php> and read how to use it. It's basically already right here on this page.

You notice something that is an anomaly, something not quite right, like a person or group buying unusually large quantities of some industrial chemicals, or you notice some objects that could be an explosive device, or components of a bomb, or you see a group of noticeably sick geese or ducks at the park, or...

You get the picture. But if you got the picture, we need you to give it to Nomad Eyes so that the right information can be found and sent on to a network of other systems and agencies.

Nomad Eyes is designed to do what a huge overload of heavy bureaucracies and deep-sixed classified databases cannot do – spin on a dime and give radically fast responses to real-time real-world events that are noticed first by you and other Real People.
